

Oracle ORA-04091 error generated when a new segment is added

Last Modified on 12/01/2021 12:24 pm EST

Symptom

The following error occurs in System Administration when attempting to add a new segment:

```
"ORA-04091: table LENELSEGMENT_GROUP_MEMBER is mutating, trigger/function may not see it  
ORA-06512: at "LENELSEGMENT1", line 6  
ORA-04088: error during execution of trigger 'LENELSEGMENT1'"
```

Resolution

To resolve this issue, do one of the following options:

1) For Oracle 10.2.0.2 users only: In the Oracle ODBC Driver Configuration window, select the **Enable Closing Cursors** check box.

2) The better solution is to upgrade the Oracle clients to 10.2.0.3 with the correct patch set. That patch set is **p5699495_10203_WINNT**. This will remove the need to select **Enable Closing Cursors**.

Applies To

OnGuard (All versions)

Oracle 10g
