

# Multiple pre- or post-SQL execution actions fail in DataExchange with an Oracle database

Last Modified on 06/10/2025 10:17 am EDT

## Symptom

In a system using an Oracle database, multiple pre-SQL execution actions or post-SQL execution actions may fail in DataExchange.

## Resolution

To resolve this issue, follow the steps below.

- 1) Verify that each pre-SQL execution action or post-SQL execution action is set up individually, rather than combined into one.
- 2) For each execution action, remove any semicolons (;).
- 3) For each execution action, verify that any COMMIT statements are removed.

## Applies To

OnGuard (All versions)

Oracle (All versions)

## Additional Information

None
