Question

When should I run Form Translator?

Answer

There are two instances when Form Translator should be run:

1) During the initial installation of OnGuard if the installation site will be using browser-based applications. In this instance Form Translator requests to be launched after Database Setup completes. It is also good practice to install Internet Information Services (IIS) on the Web application server prior to running Database Setup or Form Translator.

2) If any changes are made to any form via FormsDesigner. Form Translator automatically launches after any changes are saved in FormsDesigner.

Note: If you need to run Form Translator manually, run **Lnl.Tools.FormTranslator.exe.** The default location is:
C:\Program Files\OnGuard\Lnl.Tools.FormTranslator.exe

Applies To

OnGuard (All versions)

Additional Information

None
