

LS ID Allocation service uses TCP port 4065

Last Modified on 02/23/2022 9:23 am EST

Product Name

LS ID Allocation service uses TCP port 4065

General Information

The LS ID Allocation service, used to manage pre-allocated IDs across an enterprise installation, uses TCP port 4065.

If communications between parent (master) and child (region) servers travels through external firewalls, this port may need to be opened on those firewalls.

The OnGuard Windows Security Utility will create an exception for TCP port 4065 if the Windows firewall is turned on.

Applies To

OnGuard (All Versions)

Additional Information

None
