

# Conflict Possible for Aux Output 1

Last Modified on 11/24/2021 11:58 am EST

## Problem Overview

Conflict Possible for Aux Output 1

## Detailed Description

The user interface currently allows configuration of both Tailgate and Pre-alarm mode, both of which use Aux Output 1. These features should not be used at the same time due to a conflict with Aux Output 1.

**Note:** Not all pre-alarm configurations require Aux Output 1. The pre-alarm configuration that does use Aux Output 1 should not be used when using Tailgate or Alarm Shunt.

## Applies To

OnGuard 2010 (6.4.xxx)

## Additional Information

None
