

Buffering Streaming Video with Audio Causes Lag in Timestamp

Last Modified on 02/08/2022 9:06 am EST

Problem Overview

Buffering Streaming Video with Audio Causes Lag in Timestamp

Detailed Description

When the Buffering Streaming Video feature is activated and the video stream contains audio, the timestamp that is presented by default lags by a few seconds and the lag gradually increases. This has no effect with the video presented which is in the current live time. A workaround is to click the arrow to get to the latest minute of the buffering.

Applies To

OnGuard 2010 (6.4.500)
