Problem Overview

Anomalies Warning During Database Setup for Indexes that Should Not be Present on Enterprise and Distributed ID Masters (OG-15792)

Detailed Description

New and upgraded systems that are converted to Enterprise or Distributed ID Masters do not properly have their indexes cleaned up. Database Setup may report these as anomalies while analyzing your database. These can be safely cleaned up during the database setup process. In the event that they are not cleaned up at this point, they will be cleaned up the first time Replicator replicates to the Master Server.

Applies To

OnGuard 2008 (6.0.148) Hot Fix 1 or later
