How to view WMI events logged in Windows to troubleshoot DataConduit issues

Procedure Steps

In Windows the WMI service logs activity using Event Tracing for Windows (ETW). Activity is logged in the form of events that are visible in Event Viewer.

Logging specific to DataConduit will also appear in Event Viewer.

In Windows the WMI service logs activity in text logs located in the **%windir%\system32\wbem\logs** folder. The log file names are:

- Wbemcore.log**
- Wbemess.log**
- Mofcomp.log**
- Framework.log**
- Wmiadap.log**
- Winmgmt.log**
- Wbemprox.log**
- Setup.log**

Logging specific to DataConduit is written to file **DataConduit.log** in this folder as well.
