Question

What cleaning intervals and tools are recommended for the Nisca PR5300-series printers?

Answer

After every ribbon change, an automated cleaning cycle occurs.

Important: This cleaning cycle does NOT prevent the need to perform the more comprehensive cleaning routine listed here.

After every 2500 prints, the following components should be cleaned with the specified cleaning tool:

- Input rollers (using a Nisca Sticky Card)
- Card transport rollers (using an alcohol swab)
- Print roller (using an alcohol swab)
- Supply roller (using an alcohol swab)
- Print head (using an alcohol pen)

These cleaning tools are available from Lenel. Contact Lenel Inside Sales for more information.

Applies To

Nisca PR5300-series printers
