How to change the date and time format for events in Alarm Monitoring

Procedure Steps

The Windows date and time configuration also controls the view in Alarm Monitoring. For example, if you want a 24-hour format, then you must configure Windows to have a 24-hour format. If you wanted the date to show as MM/DD/YY instead of DD/MM/YY, then you would configure this format in Windows, and then Alarm Monitoring would show the date and time in the same format.

This is configured under **Control Panel > Clock and Region > Region > [Customize] button > Time or Date tab > Set the Time format or Short Date format.**

Applies To

OnGuard (All versions)

Windows (All versions)
