

Single-sign-on does not work with local machine authentication

Last Modified on 12/21/2021 12:48 pm EST

Symptom

In OnGuard 6.1.222 (with no hot fixes), using an Oracle 10g database on Windows Server 2003 with local machine authentication, Single Sign-on is not working. Directory was set up as a Windows Vista/XP Workstation.

Resolution

Run Domain.exe from the **OnGuard\doc\DataConduit Troubleshooting** folder. Change the directory type in OnGuard to NT4 Domain. Type the NT4 domain reported by Domain.exe and set authentication to **Current User**.

Applies To

OnGuard 2008 Plus (6.1.222); Oracle 10g
