SkyPoint Base Licensing and Secure Storage

SkyPoint Base Licensing Requires Basic Disk for Licensing

Procedure Steps

The SkyPoint Base Licensing application stores SkyPoint licensing information in Secure Storage on the hard drive of the Base machine. Because of this, the operating system partition must reside on a Basic disk and not as part of a Dynamic disk.
To check what type of disk is used:

1. From the Start menu, run **diskmgmt.msc** (Start > Run > diskmgmt.msc).
2. The disk type next to the operating system drive must be listed as Basic. If the drive is listed as Dynamic, this server cannot be used for SkyPoint Base.

Applies To

SkyPoint Base (All Versions)
