

Runtime Error when running report in web-based AAM

Last Modified on 12/28/2021 12:54 pm EST

Symptom

Runtime error when running a report in Web-based AAM.

Description: An application error occurred on the server. The current custom error settings for this application prevent the details of the application error from being viewed remotely (for security reasons). It could, however, be viewed using a browser running on the local server machine.

Details: To enable the details of this specific error message to be viewable on remote machines, create a tag within a **web.config** configuration file located in the root directory of the current web application. This tag should then have its **mode** attribute set to **Off**.

Notes: The error page that is shown can be replaced by a custom error page by modifying the **defaultRedirect** attribute of the application's configuration tag to point to a custom error page URL:

Resolution

Enable write permission for network service under **C:\WINDOWS\Temp**.

Applies To

Browser-based applications
