ODBC Fails SQL Authentication from client computer to a Named Instance in the server

Last Modified on 05/14/2025 11:35 am EDT

Symptom

When the ACCESSCONTROL database is attached to a named instance, the following error might occur when configuring the ODBC on a client system:

```
Microsoft SQL Server Native Client 10.0 : A network-related or instance-specific error has occurred while establishing a connection to SQL Server.
```

```
Server is not found or not accessible. Check if instance name is correct and if SQL Server is configured to allow remote connections.
```

Resolution

Verify that the SQL Server Browser service is running on the server. This service provides SQL Server connection information to client computers.
