

LS License server is crashing with error "Application connection with the license server is invalid. Most likely the license server was stopped and then restarted."

Last Modified on 01/10/2022 4:10 pm EST

Symptom

The LS License server presents the following message before crashing:

```
"Application connection with the license server is invalid. Most likely the license server was stopped and then restarted."
```

The Event Viewer shows the following:

```
"login failed for User Lenel reason; failed to open the explicitly specified database...."
```

Resolution

Multiple licenses are still in the license folder even after they are deleted using License Administration.

To fix this issue:

1. Deleted all licenses directly from the folder.
2. Restart the License service.
3. Install the license.

Applies To

OnGuard (All versions)
