

How Do I Use The Text Field Filter For User Transaction Reports?

Last Modified on 06/09/2025 4:40 pm EDT

Question

How do I use the text field filter for user transaction reports?

Answer

There are many choices for what value to enter into the text field when you are filtering a user transaction report. This article will explain what options are available based upon whether you select Object, Type, or Details.

If you select **Details**, you should enter the name of the specific object you are looking for (i.e. if searching for who modified a cardholder, you should enter the cardholder name). This is usually the best method to use when looking for a specific transaction.

If you select **Type**, the below values are all of the options you have to enter in the text box.
