

# Configuring DataConduit's Logging Directory

Last Modified on 02/23/2022 9:51 am EST

DataConduit - Configuring the logging directory for DataConduit

## Procedure Steps

To configure where the LS DataConduit Service writes its log:

1. Run **RegEdit**.
2. Navigate to the below directory based on the server's operating system:  
**For 32-bit OS:** HKEY\_LOCAL\_MACHINE\Software\Lenel\OnGuard\DataConduit  
**For 64-bit OS:**  
HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node\Lenel\OnGuard\DataConduit
3. Locate DebugFile and Modify the key. The default location starting in OnGuard 7.3 is **C:\ProgramData\Lenel\logs\DataConduit.log**. If desired, a custom location can be specified like **D:\Logs\DataConduit.log**.
4. If the above key does not exist, DataConduit looks to one of the following locations:  
**For 32-bit OS:** HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\WBEM\CIMOM, Logging Directory  
**For 64-bit OS:** HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node\Microsoft\WBEM\CIMOM, Logging Directory
5. If the above key does not exist, DataConduit looks to one of the following locations:  
**For 32-bit OS:** HKEY\_LOCAL\_MACHINE\SOFTWARE\Lenel\OnGuard, LogFilePath  
**For 64-bit OS:** HKEY\_LOCAL\_MACHINE\SOFTWARE\WOW6432Node\Lenel\OnGuard, LogFilePath

## Applies To

OnGuard (all versions)

## Additional Information

None
