# Using Selective Cardholder download on certain systems can slow down the panel download to over 20 minutes

Last Modified on 06/09/2025 3:38 pm EDT

## Symptom

Using Selective Cardholder download on certain systems can slow down the panel download to more than 20 minutes.

## Resolution

The systems with this symptom usually have a large number of cardholders, with many access levels in common.

Enable in the ACS.INI to acquire the log. In the sample below, notice the time gap between starting the cardholder download and the BulkAddBadge:

[CommunicationServer] ConcurrentDownloadsLimit=6 DBDownloadDebugFile=1

[04/16/2018 15:13:58] CDatabaseThread::DownloadTimezones: timezone 65736
