

Lenel encryption guide for OnGuard 7.5 missing steps or correct name for TLS Certificate install

Last Modified on 05/08/2025 6:14 pm EDT

OnGuard 7.5 Encryption for Controllers User Guide does not contain steps or correct names for TLS certificates to install.

Procedure Steps

Configure TLS Encryption Using a Default Certificate Prerequisites

1. Establish unencrypted communications to the controller

a. In the OnGuard Alarm Monitoring application, verify that the access panel (controller) is visible and online.

2. Verify that default certificates are available.

a. Navigate to the certificates folder in the OnGuard install directory (example: ..\Program Files(x86)\OnGuard\Certificates).

b. Locate the following files:

- Mercury_ca-cert.crt - for controllers with default certificates
- Mercury_CertRootCA1024.crt - for certificates with 1024 keys
- Mercury_CertRootCA2048.crt - for certificates with 2048 keys
- Mercury_CertRootCA4096.crt - for certificates with 4096 keys
- Mercury_rootca.crt - root certificate authority (CA)

3. Verify that the access panel (controller) firmware is revision 240 or higher.

4. Know the username and password to log into the access panel (controller) configuration web page.

*Install the Default TLS Certificate on the OnGuard Communication Server*1. Identify the certificate on the controller by accessing the certificate information on the configuration web page:

a. In System Administration, select **Access Control > Access Panels**.

b. Select a Series 2 controller form.

- c. On the Location sub-tab, click **Configuration Web Page**.
- d. Log in using your user name and password.
- e. Click **Load Certificate** to view the certificate information.

2. On the Communication Server, locate the certificate that matches the certificate on the controller.

Note:

The following are the default certificate sizes and max certificate sizes for the panels (based on: <https://mercury-security.com/portal/knowledge-base/topic:product-faq-capabilities/what-are-the-certificate-sizes-supported/>).

Controller Type	Default Certificate Size (bits)	Max Certificate Size (bits)	Default OnGuard certificate file
LNL-2210, LNL-2220, LNL-3300	1024	1024	Mercury_CertRootCA1024.crt
LNL-4420 LNL-2210-X, LNL-2220-X, LNL-3300-X, LNL-4420-X	2048 3072	4096	Mercury_CertRootCA2048.crt Mercury_CertRootCA4096.crt

3. Using Windows Explorer, double-click a certificate file to display the **Certificate** dialog.
4. Click **Install Certificate**. The Certificate Import Wizard is displayed.. Options for Certificate Store are displayed. 5. Click **Next**.

Note: If prompted, store the certificate on the Local Machine (not for user).

6. Select the **Place all the certificates in the following store** radio button.
7. For the Certificate store, click **Browse**.
8. Select **Trusted Root Certification Authorities**.
9. Click **OK**.
10. Click **Next**.
11. Click **Finish**.

Note: If a Security Warning is displayed, click **Yes** to install the certificate. 12. After the certificate is installed, restart the **LS Communication Server**.

Note: For environments with a variety of Lenel controllers, consider loading all four (4) Mercury certificates and then restart the LS Communication Server once.

13. To view the installed certificate(s) in the Certification Manager list, click the **Start** button, then type **certmgr.msc** in the search field and press **Enter**.
