How to increase LS Reporting (JReport/LogiReport) to use a larger maximum heap size

Last Modified on 03/31/2025 11:51 am EDT

Procedure Steps

In some cases, you might need to increase the Java maximum heap size from the default 1 GB maximum value to satisfy the system's needs.

1. Locate the **NTService.ini** configuration file in **C:\Program Files\JReport\Server\bin**.
2. Edit the file to include the new maximum heap size by replacing **-Xmx1024m** with the desired value. Typically, this value is approximately 25% of the system maximum memory.
3. Save the changes to the file and restart the LS Reporting service.

Applies To

OnGuard 8.0 and later with LS Reporting
