curl command to enable "get non-local users" on 6.0 Netbox

Last Modified on 05/13/2025 3:32 pm EDT

After upgrading to 6.0, Allina could no longer use the API to get people from the Global partition on that Netbox. Fixed by running curl "http://localhost/nbws/properties/setbool?propertyName=s2sys.nbapi.nonlocal&value=true&persist=true"

The API user has to have full system setup, not full partition setup.

Eventually there will be a feature to toggle this in the UI, maybe. Escalated 838517
