

Changing Global IP address causes problems

Last Modified on 11/03/2025 10:24 am EST

Here are things to check if Global IP address gets changed and NCs aren't connected or you can't launch to them:

On Global: `usr/local/s2global/SymmetricDS/conf/global.properties`

`/etc/hosts`

If the old IP address is still in `/etc/hosts`, you may not be able to restart rabbitmq on Global

On NC, but these may change automatically after you fix Global:

`/var/lib/s2sys/s2netbox/conf/global.properties` and `sym_node sync_url`
